

CONTROLLING OFFICER'S REPLY

EEB(F)128

(Question Serial No. 1347)

Head: (49) Food and Environmental Hygiene Department

Subhead (No. & title): (-) Not specified

Programme: (2) Environmental Hygiene and Related Services

Controlling Officer: Director of Food and Environmental Hygiene (Donald NG)

Director of Bureau: Secretary for Environment and Ecology

Question:

Regarding public toilet refurbishment projects, please advise this Committee of the following:

1. What are the numbers of public toilet refurbishment or facelifting projects completed, under planning and commenced, and the respective expenditures involved?
2. Please set out, with a breakdown by District Council district, the public toilets for which the management service is procured separately under a dedicated contract. What are the respective timetables for the Food and Environmental Hygiene Department (FEHD) to progressively extend the application of such approach to other districts?
3. What is the current number of public toilets with application of the smart public toilet system? Has FEHD assessed the effectiveness of the smart public toilet system? If yes, what are the details? If no, what are the reasons?
4. FEHD has explored, in collaboration with the Electrical and Mechanical Services Department, the use of motion sensors to detect abnormal movements of public toilet users and issue prompt alerts. The system is now under testing in an accessible toilet of a smart public toilet. In this regard, what are the test results? Will FEHD consider introducing the system to other public toilets? If yes, what are the details? If no, what are the reasons?

Asked by: Hon YANG Wing-kit (LegCo internal reference no.: 25)

Reply:

1. The Food and Environmental Hygiene Department (FEHD) has actively taken forward the Enhanced Public Toilet Refurbishment Programme with the Architectural Services Department (ArchSD) since 2019-20. As at 31 December 2024, full refurbishment or facelifting projects for about 370 public toilets have been rolled out as scheduled, and the works for 162 of which have been completed. The details of the projects completed and commenced as well as the estimated expenditures for respective projects are set out in **Annex I**. FEHD and ArchSD are planning to commence the refurbishment or facelifting projects for 110 public toilets in 2025-26. The estimated expenditures for and details of respective projects are set out in **Annex II**.

2. The public toilet cleansing service of FEHD is generally included in its street cleansing service contracts and undertaken by street cleansing contractors serving respective contract areas. FEHD has implemented an approach of procuring the public toilet management service separately through dedicated contracts on a pilot basis in Mong Kok and Tsuen Wan districts upon renewal of its cleansing service contracts since the fourth quarter of 2022. This means that the public toilet management service is taken out from the street cleansing service contracts and procured separately under a dedicated contracts. Provisions requiring toilet attendants to have undergone relevant vocational training with recognised qualifications will be added to the new contract with a view to upgrading service standards. Since December 2024, FEHD has extended the application of such approach to other districts upon renewal of its street cleansing service contracts. The list of existing public toilets for which the management service is procured separately under a dedicated contract is set out in **Annex III**.
3. FEHD has actively leveraged technology to enhance public toilet services and has, in collaboration with the Electrical and Mechanical Services Department (EMSD), installed the smart public toilet system in 14 public toilets to collect daily operation data of public toilets for better service quality as well as real-time monitoring of the utilisation of public toilets, environmental parameters, and the usage of consumables and electrical appliances. The system will notify toilet attendants or service contractors through the Internet-of-Things technology for follow-up actions. In addition, a user feedback system is installed in 13 smart public toilets to collect information on users' satisfaction with the public toilet services. In 2024, over 21 000 responses were received from the user feedback system of these 13 smart public toilets. More than 70% of the users indicated satisfaction with the public toilet services.

Apart from conducting regular assessments, monitoring and data analysis of the smart public toilet system and its facilities, FEHD has also compared various smart equipment options and selected the more cost-effective ones to cope with changes in demand and technological developments in the future. FEHD and EMSD plan to progressively install the system in another 11 public toilets in different districts, which vary in scale and utilisation rate, for further testing. The 14 public toilets which have installed the smart public toilet system and the 11 public toilets which will have the system installed are set out in **Annex IV**.

4. Starting from February 2024, FEHD has been working with EMSD on the testing of fall detection sensors in an accessible unisex toilet of a smart public toilet. Whenever the sensor detects someone falling down or not moving for a long time in the toilet compartment, it will trigger the alarm to call for timely action. The preliminary test results are satisfactory. FEHD has planned to gradually extend the use of fall detectionsensors to the new and refurbished public toilets under its management.
