### Pest Control Advisory Section

6/F, Yung Fung Shee Memorial Centre,  
79 Cha Kwo Ling Road, Kwun Tong, Kowloon  
Tel : 3188 2064

# Prevent Disease Eliminate Rodent Nuisance

Construction Site

食物環境衛生署  
Food and Environmental  
Hygiene Department

## Causes of rodent infestation

### Construction sites are susceptible to rodent infestation because:

- food, food remnants and refuse in construction sites are the food source for rodents;
- temporary structures such as site offices and storerooms provide shelters for rodents;
- gaps between the hoardings around a construction site allow the spreading of rodent infestation from the outside;
- rodents may be brought into the site easily together with building material.

## Prevention of rodent infestation

### Eliminate food sources for rodents

- Store all food properly in covered containers;
- Dispose of food remnants and refuse properly in covered rubbish bins, which should be cleared daily;
- Do not leave dog food overnight.

### Remove rodent harbourages

- Avoid accumulation of building material or junk for a long period of time;
- Prevent rodents from entering the voids beneath container offices by screening the footings with appropriate material (e.g. metal plates) so that the openings are less than 6mm.
- The threshold clearance beneath the doors of site offices and storerooms should be less than 6mm.

### Exclude rodents from the sites

- Reduce the gaps between or under the hoardings around a construction site, particularly those facing side lanes or rear lanes, to not more than 6mm;
- Inspect unloaded building material to ensure no rodents are brought into the site with the material.

## To control rodent infestation, the following should be noted:

- Never tolerate any minor rodent infestation;
- Early detection of rodent infestation can help minimise the problem;
- Be aware of the presence of rodent signs such as droppings, burrows, gnawing marks, smear, etc;
- Appoint pest control companies for regular inspections and control when necessary.
